

## Vehicular Delivery

A delivery vehicle is a man-made device that can be used to transport items. Try doing a bit of research on the internet, then try and answer the questions below:

1. What examples of delivery vehicles can you think of? Discuss with your group and **list four different delivery vehicles in your learning journals.**

2. For each of these four vehicles, list an item that this vehicle could deliver and another item that this vehicle couldn't deliver in your learning journals. For each item that it couldn't deliver, briefly explain why.

3. Consider the following three delivery vehicles: a scooter, a pushbike and a van. Which of these three vehicles do you think would be the best for delivering mail in a city centre? Discuss with your team, then list the pros and cons of each vehicle for delivering mail in your learning journals.
