

Delivery vehicles

1. What examples of delivery vehicles can you think of? Discuss with your group and see how many you can list down in your learning journal. To get you started, check out a few examples in these images:

2. Pick three of the vehicles that you identified in task 1. For each of them, what goods does this vehicle normally deliver? Discuss with your group and write your answers in your learning journals.
3. For each of the same three vehicles, can you think of any goods that the vehicle *could* but does not *currently* deliver? What adjustments (if any) would you need to make to the vehicle to make this possible? Discuss with your group and write your answers in your learning journals.
4. Out of the same three vehicles, which does your team think would be best at delivering mail to people's letterboxes in a suburban environment? Discuss with a team and make sure that you agree on an answer. Justify your answer by listing the pros and cons of each vehicle in your learning journals.
